

General Information

- These quality *Aluminum frames* have been finished with an electrostatically applied powder-coated nylon paint for a durable long-lasting finish. This state-of-the-art finish is warranted by the manufacturers against peeling and flaking due to defective painting.
- The *STRAPS* are made from Grade A virgin vinyl with built-in “memory” so that they return to the original tautness after relaxing with body heat.

Annual Maintenance

- Periodic hosing of the slings with a hard spray from a garden hose will dislodge dirt, food and airborne pollutants from the frame and straps.
- AT SEASON’S END: Using a diluted solution of water and any liquid cleaner (*preferably one containing “pine”*) wipe down the frames of the furniture and wipe both the top and bottoms of each strap. Rinse well. For heavily soiled straps we recommend *Feronclean*, available in our Patio Shops.
- WINTER STORAGE: Your aluminum frames are designed to withstand the rigors of winter. To keep the furniture looking good and to extend the life of the fabric slings *we strongly recommend that you use plastic covers for the winter*. Our Patio Shops stock a full line of protective covers for individual pieces of furniture, or large covers that will protect both the table and all of the dining chairs.
- All frames should be stored in the upright position, to avoid damage from condensate inside the frames freezing and “bursting”, which is not covered under warranty.

Note: The manufacturer’s warranty on your furniture does not cover “acts of God,” which includes damage from wind or snow. The tempered glass is not covered under the warranty. Use the correct umbrella weight, tightening the thumbscrew and *closing the umbrella after every use*.

Maintaining Your Sales Receipt & Records

You will need to file your new receipts for the future. You will need the style numbers and color codes to correctly order new parts, straps or to replace the vinyl feet glides if they wear out.
